

## ENTRUST® CERTIFICATE SERVICES

Expanded automation options  
simplify certificate lifecycle management

### Benefits

- World-class support
- Compliance testing for web servers
- Malware scanning and reputation monitoring bundles
- Easy administration with centralized web-based tools
- Manage Entrust and third-party certificates from one dashboard
- Protection against unexpected certificate expiry
- Rapid revocation
- Robust audit and reporting tools
- Dashboards and alert features
- Unlimited reissues
- Unlimited server licensing
- Instant issuance for pre-approved domains and organizations
- Trust in more than 99% of browsers
- ServiceNow certification
- Integration with Venafi
- Ansible module enables TLS/SSL deployment at scale

The Entrust Certificate Services (ECS) platform greatly reduces security issues associated with certificate lifecycle management. Increased visibility into security loopholes helps you stay in compliance and prevent threats. The greatest benefit is how easy it is to achieve the peace of mind that comes with more service uptime and maintaining brand reputation.

ECS takes the guesswork out of certificate lifecycle management and is included with digital certificates purchased from Entrust. Accessible from any web browser, an intuitive dashboard delivers critical insights via real-time reporting that helps you avoid security lapses and stay in compliance.

A centralized dashboard makes it easy for you to consolidate and manage all of your digital certificates from one location, regardless of issuing certification authority (CA).

### Automation capabilities

#### ECS Ansible Module

This module connects with ECS to automate certificate deployment at scale on limitless endpoints. Use it to automate certificate requests, reissues and renewals.

#### Continuous Automated Domain Verification Using Email Confirmation

Streamline domain verification to the click of a button with our self-service feature that automates domain verification for ongoing instant certificate issuance after setup.

- Configure your DNS record to enable the same email to verify all domains at once
- An automated email to the address(es) listed in the DNS record is sent for approval

#### Automated Installation

Automatically install TLS/SSL certificates to avoid misconfigurations and speed up installations.

- ACME service: Apache and Apache-variant platforms
- Turbo auto-install client: Windows IIS servers

### Flexible licensing options

Our unique subscription-based plan gives customers the opportunity to reuse TLS/SSL certificate licenses, providing a cost-effective way to plan and budget TLS/SSL certificate inventory. When licenses are decommissioned, they are returned to inventory and available for reuse.

Our units-based program offers traditional certificate license provisioning.

See [SSL Subscription Service Comparison](#).

### Best practices

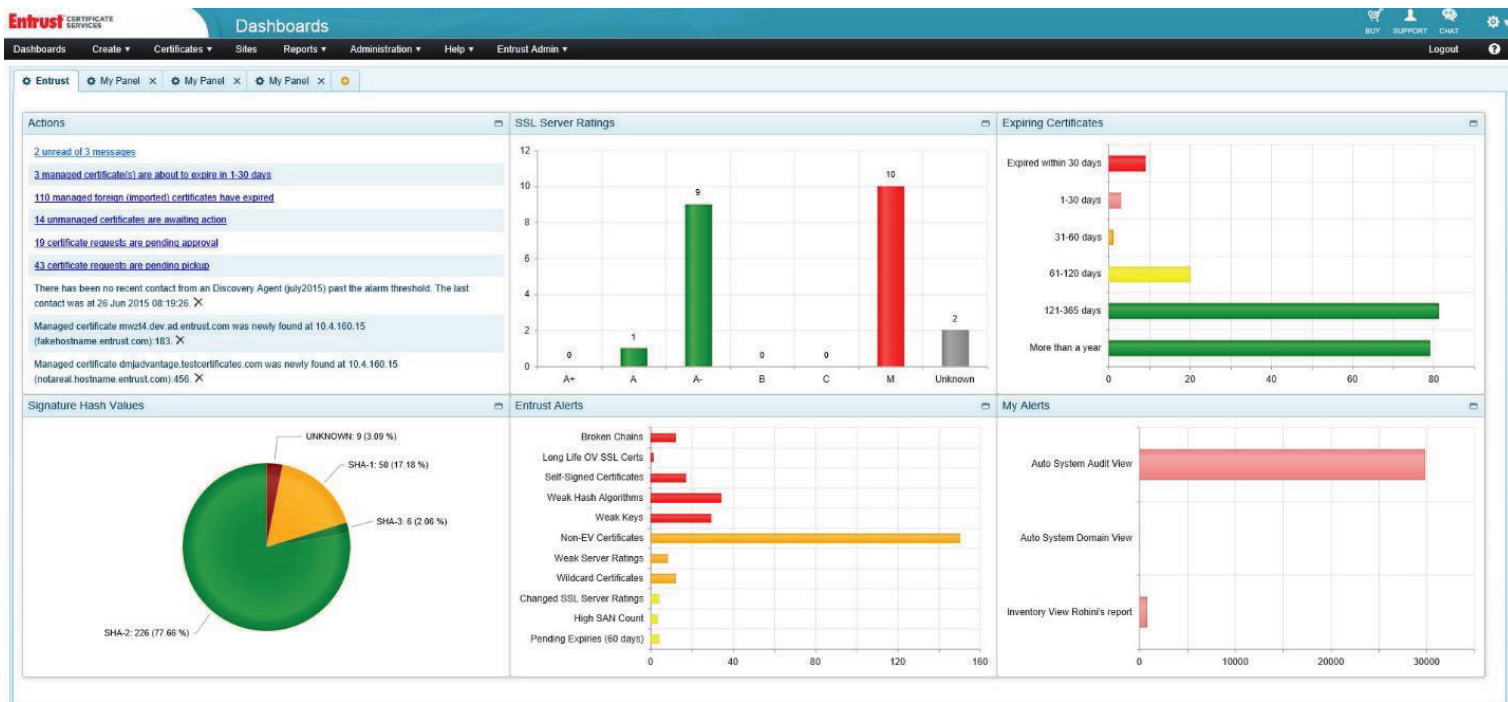

Ongoing training and thought leadership provide education on practical techniques, trends, and security threats.

### Integrated TLS/SSL Server Test

Determine if your web server configuration is optimized for security. Our TLS/SSL Server Test performs a deep analysis of any TLS/SSL server configuration on the public internet, identifies vulnerabilities, and grades your level of compliance with best practices. It also provides email and screen notifications when servers do not meet your high standards.

**ENTRUST**  
SECURING A WORLD IN MOTION

Fully configurable dashboard delivers the information you need when and where you need it.

## Centralized digital certificate management – right from the cloud

### Certificate Discovery

Find Entrust and third-party digital certificates on servers across your network. There is an option to consolidate all certificates into a single, centralized dashboard, making it easier to audit and manage all of your digital certificates, regardless of issuing CA.

### CT Certificate Import

Query and import certificates from the CT logs and consolidate your complete inventory into a single management platform (available for platinum customers).

### Easy lifecycle management, reporting, and alerts

Comprehensive tools simplify certificate creation, reissuance, revocation, and renewals. Our comprehensive reporting tools offer deep metrics, data exports, custom filters, and more.

### Website Security Bundles (provided by SiteLock)

Scans, detects, and remediates web-based security risks on your website and network. Also provides reputation monitoring to preserve business uptime and customer trust.

### Broad range of certificates

- TLS/SSL – EV multi-domain, OV, Wildcard, multi-domain, and Private certificates
- Document Signing
- Code Signing
- S/MIME
- Mobile Device
- QWACs (for PSD2 and eIDAS)
- QSeals (for PSD2)

All are supported by our Entrust award-winning service.

### Easy, delegated administration

Enroll once and request multiple digital certificates without any software downloads or installations. Delegate certificate administrator(s) to manage certificate activity for a specified group.

### Award-winning portfolio

Entrust was awarded Frost & Sullivan's 2020 Global Customer Value Leadership Award for its certificate issuance and management portfolio, as well as Frost & Sullivan's 2020 Frost Radar™ Best Practices Award for Innovation Excellence in the Global Transport Layer Security Certificates Market.
