

Swift SaaS Implementation: Status as of 20th March 2019

Completed

- ✓ SWIFT configuration requirements shared with Axletree
- ✓ Meeting(s) with AIG Network team to discuss connectivity options
- ✓ Pros/Cons Matrix of connectivity options shared by Axletree (VPN; MPLS). Expecting same from AIG Network

Issues\Delays

- ✓ Resource competition on Network side delaying set-up of connection (MaaS project)
- ✓ Lead time on MPLS connection could delay cut-over to Prod
- ✓ "Akshay Utility" replacement needed from Treasury IT (File Act Messaging)

Current work items

- ✓ Moving code to Biztalk Staging to commence testing with our File Act partners (7 Banks). Treasury IT deliverable.
- ✓ AIG Network team to create picture of connectivity design options and have security sanction work
- ✓ Pros/Cons Matrix of connectivity options requested from AIG Network (expect IPSEC in lower environments for testing with added resiliency through MPLS/Leased Line in Prod)
- ✓ UAT test scripts being finalized with Axletree
- ✓ Axletree ordering of SWIFT software license and certificates
