Password Configuration – Investments Production Servers - vCenter

vCenter Authentication Identity Source

Active Directory (Integrated Windows Authentication):

1. vCenter leverages standard windows authentication; it does not store separate login credentials
Example: SAS team accesses vCenter with normal LAN accounts that are governed by Active Directory Domain Policy

Evaluate the completeness of the population

IAG per corroborative inquiry, examination, observation and self-inquiry performed with IT process owners from Corporate Systems Database during walkthroughs on 5/30/2018 & 6/13/2018 and request of evidence on 09/04/2018 obtained:

.
1) Daily System Generated Report, vCenter_VM_Inventory_20180529, and script for Inventory for VM (Virtual Machine) Server for all Investments at the Server platform level for targeted production environment (Source: \\wltinvfs4\appsupport\Reports\Batch).

```

Scripts (Get-vCenter.ps1 & Virtual.psm1) used to create the System Generate Report - VM Inventory form vCENTER Servers 1 of 3

```
.SYNOPSIS          This script will set up, load module to product DailyReports
.PARAMETER XML     This is a link to a file containing XML config for this script
                  see "c:\asg\scripts\vCenter_Instruct.xml" for default one
.PARAMETER ExportPath Report output path.
.DESCRIPTION      This script will query multiple component inventories, including roles, permissions, virtual machines, hosts, and datastores.
.EXAMPLE          Export-vCenterDailyReport -vCenterServer ftwvsvcenter2.investments.aig.net -ExportPath "c:\temp"
                  This command will query the ftwvsvcenter2 vCenter, populate results, and output to "c:\temp\yyyyMMdd\".
```

```
#>
param (
    [Parameter(Mandatory=$True)][Alias("InstructFile")][string]$XML
)
if ( (Get-PSSnapin -Name VMware.VimAutomation.Core -ErrorAction SilentlyContinue) -eq $null ) { Add-PSSnapin VMware.VimAutomation.Core }
if ($verbose) {
    $VerbosePreference = "Continue" #this will kick the module into debug write mode
}
```

```
#module import:
Import-Module "c:\asg\psmodules\Virtual\Virtual.psm1"
```

Incl. instructions (See Pg. 5) to
create .csv file
"VM_Inventory" (pg. 9)

Extract configuration
details from
VCENTER

```
[xml]$xmlInstruct = Get-Content $XML
```

```
#collect Configuration from File
$lvCenters = $xmlInstruct.XML_INSTRUCT.VCENTER_SERVER; #vcenter list or comma seperated strings; will combine multiple entries into an array
$ThisDate = Get-Date -format yyyyMMdd; #to match batch
$out = ($xmlInstruct.XML_INSTRUCT.OUTPUT_DIR + $ThisDate);
if (!(test-path $out)) {
    new-item $out -type directory
}
#unused in this version: #preserving for further extension
$prefix = $xmlInstruct.XML_INSTRUCT.OUTPUT_FILE_PREFIX; #prepend report with this
```

```
"running vcenter Reports " + ($lvCenters -join(", ")) + "`n`routput:$out"
```

```
Export-vCenterDailyReport -vCenterServer $lvCenters -ExportPath "$out" -sReplbl $prefix
